

Sales Tracker in Google Sheets

Data Analytics Track – Task Report

1. Objective

To build a lightweight sales tracker in Google Sheets that automatically calculates daily, weekly, and monthly sales totals from raw sales entries.

2. Tools Used

- Google Sheets
- Spreadsheet formulas
- Data validation and dropdown lists

3. Spreadsheet Structure

Sheet	Purpose
Raw Data	Stores date, order ID, product, category, quantity, unit price, and total sales.
Summary	Displays overall, daily, weekly, and monthly sales totals.

4. Important Formulas

Purpose	Formula
Total Sales per order	=E2*F2
Overall Total Sales	=SUM('Raw Data'!G2:G)
Daily Sales	=SUMIF('Raw Data'!A:A,A7,'Raw Data'!G:G)
Unique Dates	=UNIQUE('Raw Data'!A2:A)
Weekly Sales	=SUM('Raw Data'!G2:G)
Monthly Sales	=SUM('Raw Data'!G2:G)

5. Data Validation

- Quantity validation was applied to E2:E1000, requiring values greater than or equal to 1.
- Category dropdown validation was applied to D2:D1000 with the options Electronics, Accessories, and Furniture.

6. Results and Verification

Metric	Verified Result
Overall Total Sales	■1,75,500.00
Weekly Sales – Week 1	■1,75,500.00
Monthly Sales – September 2026	■1,75,500.00
Daily Sales Entries	7 dates / 7 orders
